Scope:

- How many **modules**
- Registration features
- Module & their respective key features (login, authentication stuff these are trivial stuffs)
- Insightful outputs
- **Depth** instead of Breadth (discard similar features)
- As a solution, what **problems** does our software address and what **benefits** does it provide? It may include:
  - Management procedure
  - Why is this S/W needed
  - Problems & opportunities ***
  - **SWOT** analysis

BPMN Diagram:

- Requirement analysis
- (waiting for class lectures)

Mock UI:

- FIGMA (start exploring)
- Major UI (not necessarily login parts)
- Core functionality
- User friendly inputs
- **Dashboard*****

Class Diagram + ERD:

- Persistent data

Interaction Diagram:

- Divided into **two** parts (2 individual presentation)
  - Sequence
  - Collaboration

State Diagram:

- The states of software (pretty straightforward ig)

- ☐ Project must be deployed in **public cloud**
- ☐ Presentation time **20 min** allocated (per grp)
